

Human Development Indices and Indicators: 2018 Statistical Update

Briefing note for countries on the 2018 Statistical Update

Bahamas

Introduction

This briefing note is organized into ten sections. The first section presents information on the country coverage and methodology of the 2018 Statistical Update. The next five sections provide information about key indicators of human development including the Human Development Index (HDI), the Inequality-adjusted Human Development Index (IHDI), the Gender Development Index (GDI), the Gender Inequality Index (GII) and a section with five dashboards.

This Statistical Update does not contain the Multidimensional Poverty Index (MPI). This year, the MPI was computed using the methodology jointly revised by the Oxford Poverty and Human Development Initiative (OPHI) and the Human Development Report Office (HDRO) and it will be available in due course.

It is important to note that national and international data can differ because international agencies standardize national data to allow comparability across countries and in some cases may not have access to the most recent national data.

Country coverage and the methodology of the 2018 Statistical Update

The 2018 Statistical Update presents the 2017 HDI (values and ranks) for 189 countries and UN-recognized territories, along with the IHDI for 151 countries, the GDI for 164 countries, and the GII for 160 countries. It is misleading to compare values and rankings with those of previously published reports, because of revisions and updates of the underlying data and adjustments to goalposts. Readers are advised to assess progress in HDI values by referring to table 2 ('Human Development Index Trends') in the 2018 Statistical Update. Table 2 is based on consistent indicators, methodology and time-series data and, thus, shows real changes in values and ranks over time, reflecting the actual progress countries have made. Small changes in values should be interpreted with caution as they may not be statistically significant due to sampling variation. Generally speaking, changes at the level of the third decimal place in any of the composite indices are considered insignificant.

Unless otherwise specified in the source, tables use data available to HDRO as of 15 July 2018. All indices and indicators, along with technical notes on the calculation of composite indices, and additional source information are available online at <http://hdr.undp.org/en/data>

For further details on how each index is calculated please refer to [Technical Notes 1-5](#) and the associated background papers available on the Human Development Report website: <http://hdr.undp.org/en/data>

Human Development Index (HDI)

The HDI is a summary measure for assessing long-term progress in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living. A long and healthy life is measured by life expectancy. Knowledge level is measured by mean years of education among the adult population, which is the average number of years of education received in a life-time by people aged 25 years and older; and access to learning and knowledge by expected years of schooling for children of school-entry age, which is the total number of years of schooling a child of school-entry age can expect to receive if prevailing patterns of age-specific enrolment rates stay the same throughout the child's life. Standard of living is measured by Gross National Income (GNI) per capita expressed in constant 2011 international dollars converted using purchasing power parity (PPP) conversion rates. For more details see [Technical Note 1](#).

To ensure as much cross-country comparability as possible, the HDI is based primarily on international data from the United Nations Population Division (the life expectancy data), the United Nations Educational, Scientific and Cultural Organization Institute for Statistics (the mean years of schooling and expected years of schooling data) and the World Bank (the GNI per capita data). As stated in the introduction, the HDI values and ranks in this Statistical Update are not comparable to those in past reports because of a number of revisions to the component indicators. To allow for assessment of progress in HDIs, the 2018 Statistical Update includes recalculated HDIs from 1990 to 2017 using consistent series of data.

Bahamas' HDI value and rank

Bahamas' HDI value for 2017 is 0.807— which put the country in the very high human development category—positioning it at 54 out of 189 countries and territories. Between 2000 and 2017, Bahamas' HDI value increased from 0.776 to 0.807, an increase of 4.0 percent. Table A reviews Bahamas' progress in each of the HDI indicators. Between 1990 and 2017, Bahamas' life expectancy at birth increased by 5.1 years, mean years of schooling increased by 0.2 years and expected years of schooling increased by 0.7 years. Bahamas' GNI per capita decreased by about 8.7 percent between 1990 and 2017.

Table A: Bahamas' HDI trends based on consistent time series data and new goalposts

	Life expectancy at birth	Expected years of schooling	Mean years of schooling	GNI per capita (2011 PPP\$)	HDI value
1990	70.7	12.1		29,221	
1995	71.4	11.7		31,159	
2000	72.4	12.1	10.9	24,120	0.776
2005	73.8	12.4	10.9	23,631	0.786
2010	74.8	12.6	10.9	22,072	0.789
2015	75.5	12.8	11.1	27,602	0.807
2016	75.7	12.8	11.1	26,632	0.806
2017	75.8	12.8	11.1	26,681	0.807

Figure 1 below shows the contribution of each component index to Bahamas' HDI since 2000.

Figure 1: Trends in Bahamas' HDI component indices 2000-2017

Assessing progress relative to other countries

The human development progress, as measured by the HDI, can usefully be compared to other countries. For instance, during the period between 2000 and 2017 Bahamas, Argentina and Barbados experienced different degrees of progress toward increasing their HDIs (see figure 2).

Figure 2: HDI trends for Bahamas, Argentina and Barbados, 2000-2017

Bahamas' 2017 HDI of 0.807 is below the average of 0.894 for countries in the very high human development group and above the average of 0.758 for countries in Latin America and the Caribbean. From Latin America and the Caribbean, countries which are close to Bahamas in 2017 HDI rank and to some extent in population size are Belize and Trinidad and Tobago, which have HDIs ranked 106 and 69 respectively (see table B).

Table B: Bahamas' HDI and component indicators for 2017 relative to selected countries and groups

	HDI value	HDI rank	Life expectancy at birth	Expected years of schooling	Mean years of schooling	GNI per capita (PPP US\$)
Bahamas	0.807	54	75.8	12.8	11.1	26,681
Belize	0.708	106	70.6	12.8	10.5	7,166
Trinidad and Tobago	0.784	69	70.8	12.9	10.9	28,622
Latin America and the Caribbean	0.758	—	75.7	14.4	8.5	13,671
Very high HDI	0.894	—	79.5	16.4	12.2	40,041

Inequality-adjusted HDI (IHDI)

The HDI is an average measure of basic human development achievements in a country. Like all averages, the HDI masks inequality in the distribution of human development across the population at the country level. The 2010 HDR introduced the IHDI, which takes into account inequality in all three dimensions of the HDI by 'discounting' each dimension's average value according to its level of inequality. The IHDI is basically the HDI discounted for inequalities. The 'loss' in human development due to

inequality is given by the difference between the HDI and the IHDI, and can be expressed as a percentage. As the inequality in a country increases, the loss in human development also increases. We also present the coefficient of human inequality as a direct measure of inequality which is an unweighted average of inequalities in three dimensions. The IHDI is calculated for 151 countries. For more details see [Technical Note 2](#). Due to a lack of relevant data, the IHDI has not been calculated for this country.

Gender Development Index (GDI)

In the 2014 HDR, HDRO introduced a new measure, the GDI, based on the sex-disaggregated Human Development Index, defined as a ratio of the female to the male HDI. The GDI measures gender inequalities in achievement in three basic dimensions of human development: health (measured by female and male life expectancy at birth), education (measured by female and male expected years of schooling for children and mean years for adults aged 25 years and older); and command over economic resources (measured by female and male estimated GNI per capita). For details on how the index is constructed refer to [Technical Note 3](#). Country groups are based on absolute deviation from gender parity in HDI. This means that the grouping takes into consideration inequality in favour of men or women equally. Due to a lack of relevant data, the GDI has not been calculated for this country.

Gender Inequality Index (GII)

The 2010 HDR introduced the GII, which reflects gender-based inequalities in three dimensions – reproductive health, empowerment, and economic activity. Reproductive health is measured by maternal mortality and adolescent birth rates; empowerment is measured by the share of parliamentary seats held by women and attainment in secondary and higher education by each gender; and economic activity is measured by the labour market participation rate for women and men. The GII can be interpreted as the loss in human development due to inequality between female and male achievements in the three GII dimensions. For more details on GII please see [Technical Note 4](#).

Bahamas has a GII value of 0.340, ranking it 75 out of 160 countries in the 2017 index. In Bahamas, 21.8 percent of parliamentary seats are held by women, and 87.4 percent of adult women have reached at least a secondary level of education compared to 87.6 percent of their male counterparts. For every 100,000 live births, 80 women die from pregnancy related causes; and the adolescent birth rate is 26.7 births per 1,000 women of ages 15-19. Female participation in the labour market is 70.0 percent compared to 82.0 for men.

In comparison, Belize and Trinidad and Tobago are ranked at 89 and 73 respectively on this index.

Table E: Bahamas' GII for 2017 relative to selected countries and groups

	GII value	GII Rank	Maternal mortality ratio	Adolescent birth rate	Female seats in parliament (%)	Population with at least some secondary education (%)		Labour force participation rate (%)	
						Female	Male	Female	Male
Bahamas	0.340	75	80	26.7	21.8	87.4	87.6	70.0	82.0
Belize	0.386	89	28	63.5	11.1	78.9	78.4	53.2	81.3
Trinidad and Tobago	0.324	73	63	30.1	30.1	74.4	69.1	51.0	73.7
Latin America and the Caribbean	0.386	—	67	61.5	28.8	59.5	59.1	51.6	77.5
Very high HDI	0.170	—	15	15.9	26.7	88.8	89.5	52.9	68.9

Maternal mortality ratio is expressed in number of deaths per 100,000 live births and adolescent birth rate is expressed in number of births per 1,000 women ages 15-19.

Dashboards 1-5

Countries are grouped partially by their performance in each indicator into three groups of approximately equal size (terciles), thus, there is the top third, the middle third and the bottom third. The intention is not to suggest the thresholds or target values for these indicators but to allow a crude assessment of country's performance relative to others. Three-colour coding visualizes a partial grouping of countries by indicator. It can be seen as a simple visualization tool as it helps the users to immediately picture the country's performance. A country that is in the top group performs better than at least two thirds of countries (i.e., it is among the top third performers); a country that is in the middle group performs better than at least one third but worse than at least one third (i.e., it is among the medium third performers); and a country that is in the bottom third performs worse than at least two thirds of countries (i.e., it is among the bottom third performers). Three-color coding visualizes a partial grouping of countries by indicator. More details about partial grouping in this table are given in [Technical note 6](#).

Dashboard 1: Quality of human development

This dashboard contains a selection of 13 indicators associated with the quality of health, education and standard of living. The indicators on quality of health are lost health expectancy, number of physicians, and number of hospital beds. The indicators on quality of education are pupil-teacher ratio in primary schools; primary school teachers trained to teach; proportion of schools with access to the internet; and the Programme for International Student Assessment (PISA) scores in mathematics, reading and science. The indicators on quality of standard of living are the proportion of employed people engaged in vulnerable employment, the proportion of rural population with access to electricity, the proportion of population using improved drinking water sources and proportion of population using improved sanitation facilities.

A country that is in the top third group on all indicators can be considered a country with the highest quality of human development. The dashboard shows that not all countries in the very high human development group have the highest quality of human development and that many countries in the low human development group are in the bottom third of all quality indicators in the table.

Table F provides the number of indicators in which Bahamas performs: better than at least two thirds of countries (i.e., it is among the top third performers); better than at least one third but worse than at least one third (i.e., it is among the medium third performers); and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Belize and Trinidad and Tobago are also shown in the table for comparison.

Table F: Summary of Bahamas's performance on the Quality of human development indicators relative to selected countries

	Quality of health (3 indicators)			Quality of education (6 indicators)			Quality of standard of living (4 indicators)			Overall (13 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators												
Bahamas	0	3	0	0	2	0	2	2	0	2	7	0	4
Belize	1	1	1	0	1	1	0	4	0	1	6	2	4
Trinidad and Tobago	0	3	0	0	2	3	2	2	0	2	7	3	1

Dashboard 2: Life-course gender gap

This dashboard contains a selection of 12 key indicators that display gender gaps in choices and opportunities over the life course – childhood and youth, adulthood and older age. The indicators refer to education, labour market and work, political representation, time use and social protection. Three indicators are presented only for women and the rest are given in the form of female-to-male ratio. Countries are grouped partially by their performance in each indicator into three groups of approximately equal size (terciles). Sex ratio at birth is an exception - countries are grouped into two groups: the natural group (countries with a value of 1.04-1.07, inclusive) and the gender-biased group (countries with all other values). Deviations from the natural sex ratio at birth have implications for population replacement levels, suggest possible future social and economic problems and may indicate gender bias.

Table G provides the number of indicators in which Bahamas performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Belize and Trinidad and Tobago are also shown in the table for comparison.

Table G: Summary of Bahamas’s performance on the Life-course gender gap dashboard relative to selected countries

	Childhood and youth (5 indicators)			Adulthood (6 indicators)			Older age (1 indicator)			Overall (12 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators												
Bahamas	1	1	3	2	2	0	0	0	0	3	3	3	3
Belize	2	1	2	1	1	2	0	0	0	3	2	4	3
Trinidad and Tobago	1	0	1	1	2	1	0	0	0	2	2	2	6

Dashboard 3: Women’s empowerment

This dashboard contains a selection of 13 woman-specific empowerment indicators that allows empowerment to be compared across three dimensions – reproductive health and family planning, violence against girls and women and socioeconomic empowerment. Three-color coding visualizes a partial grouping of countries by indicator. Most countries have at least one indicator in each tercile, which implies that women’s empowerment is unequal across indicators and countries.

Table H provides the number of indicators in which Bahamas performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Belize and Trinidad and Tobago are also shown in the table for comparison.

Table H: Summary of Bahamas's performance on the Women's empowerment dashboard relative to selected countries

	Reproductive health and family planning (6 indicators)			Violence against girls and women (3 indicators)			Socioeconomic empowerment (4 indicators)			Overall (13 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators												
Bahamas	2	2	0	0	0	0	0	1	0	2	3	0	8
Belize	0	5	1	0	1	0	1	3	0	1	9	1	2
Trinidad and Tobago	1	4	1	1	0	2	0	2	0	2	6	3	2

Dashboard 4: Environmental sustainability

This dashboard contains a selection of 9 indicators that cover environmental sustainability and environmental threats. The environmental sustainability indicators present levels of or changes in energy consumption, carbon-dioxide emissions, change in forest area and fresh water withdrawals. The environmental threats indicators are mortality rates attributed to household and ambient air pollution and to unsafe water, sanitation and hygiene services, and the International Union for Conservation of Nature Red List Index value, which measures change in aggregate extinction risk across groups of species. The percentage of total land area under forest is not coloured because it is meant to provide context for the indicator on change in forest area.

Table I provides the number of indicators in which Bahamas performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Belize and Trinidad and Tobago are also shown in the table for comparison.

Table I: Summary of Bahamas's performance on the Environmental Sustainability dashboard relative to selected countries

	Environmental sustainability (6 indicators)			Environmental threats (3 indicators)			Overall (9 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators									
Bahamas	0	2	2	2	0	1	2	2	3	2
Belize	0	3	1	0	2	1	0	5	2	2
Trinidad and Tobago	0	2	4	2	0	1	2	2	5	0

Dashboard 5: Socioeconomic sustainability

This dashboard contains a selection of 10 indicators that cover economic and social sustainability. The economic sustainability indicators are adjusted net savings, total debt service, gross capital formation, skilled labour force, diversity of exports and expenditure on research and development. The social sustainability indicators are the ratio of the sum of education and health expenditure to military expenditure, changes in inequality of HDI distribution, and changes in gender and income inequality. Military expenditure is not coloured because it is meant to provide context for the indicator on education and health expenditure and it is not directly considered as an indicator of socioeconomic sustainability.

Table J provides the number of indicators in which Bahamas performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Belize and Trinidad and Tobago are also shown in the table for comparison.

Table J: Summary of Bahamas's performance on the Socioeconomic sustainability dashboard relative to selected countries

	Economic sustainability (6 indicators)			Social sustainability (4 indicators)			Overall (10 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators									
Bahamas	1	2	1	0	0	1	1	2	2	5
Belize	0	2	3	2	1	0	2	3	3	2
Trinidad and Tobago	0	2	2	0	0	1	0	2	3	5
